

Due BEFORE class Thursday 2/18

## Order Entry System

Read the resources below and write up a 2-3 page software requirements specification for an order entry system. It can be pretty high level (meaning that you don't need to know what user input, data structures, etc look like). Address the following points:

- Software Requirements Specification
  - Description of software to be developed
  - Should be a combination of what customers and the company agree the product should be
  - What should it include?
    - Purpose
      - Why it's needed/asked for
      - Background (issues)
    - Overall description of project (high level)
      - What will it do
      - How will users interact with the software

Some resources with examples:

<https://krazytech.com/projects/sample-software-requirements-specificationsrs-report-airline-data-base>

[https://relevant.software/blog/software-requirements-specification-srs-document/#Describe\\_Functional\\_and\\_Nonfunctional\\_Requirements](https://relevant.software/blog/software-requirements-specification-srs-document/#Describe_Functional_and_Nonfunctional_Requirements)

You can absolutely look for additional resources. Include citations if necessary.
