

Join Imprivata, a company leading the way in innovation and excellence in the fast growing IT Healthcare space. Work with a group of software development professionals who have years of experience and who value hard work just as much as working in a casual and fun environment. This is the chance to gain real world experience and be a part of our exciting team!

The Intern is a member of Imprivata's core Engineering team that is responsible for advancing the Company's OneSign and Confirm ID product lines for the healthcare market. This team is responsible for the development of Imprivata's OneSign client components, which provides Multifactor Authentication and Single Sign-On services for applications, and secondary authentication for clinical and remote access workflows. This position is focused on testing features extending the product features on the client-server, Mobile and Cloud platforms.
